Who are we?

Projected percentage increases in population by 2033

Proportion of population by age group 2008 and 2033

72 million

The population of the UK is expected to increase from 61 million in 2008 to 72 million by 2033. The fastest increase is expected to be England, whose population will rise by one sixth by that date.

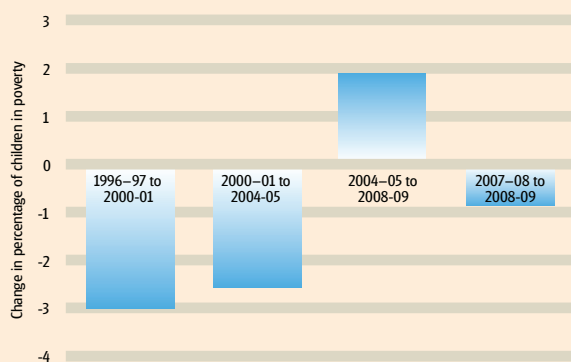

Source: Office for National Statistics

12%

The population is expected to age between 2008 and 2033. The proportion of those aged 75 and older will increase from eight to 12 per cent. The proportion of young people is also projected to rise.

SMEs, change in numbers employed

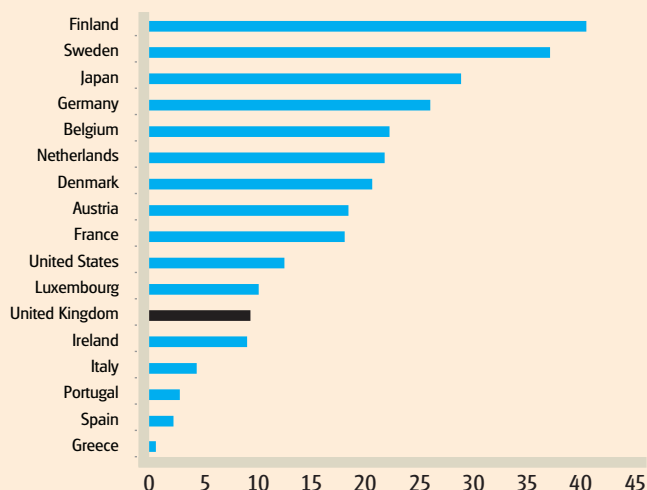

SMEs have been shrinking over the past year but at a decreasing rate. Survey responses suggest firms started expanding again from the third quarter of this year. Source: CBI

Per capita income by region

Region	Per capita income in US \$ PPP 2007
UK: North East	27134.97
UK: North West (Including Merseyside)	29752.55
UK: Yorkshire and Humberside	29307.5
UK: East Midlands	30987.67
UK: West Midlands	29904.94
UK: Eastern	33597.2
UK: London	59209.94
UK: South East	37388.58
UK: South West	32117.73
UK: Wales	26086.94
UK: Scotland	33848.25
UK: Northern Ireland	27917.78

The richest region in the UK is London with a GDP per capita over twice as high as the poorest (Wales). Source: Organisation for Economic Co-operation and Development (OECD).

High technology patents per million inhabitants

The UK was the sixth lowest for the number of high technology patents per million people in the EU 15 as well as being lower than both the US and Japan in 2007. Source: OECD

Business birth and death rates by region

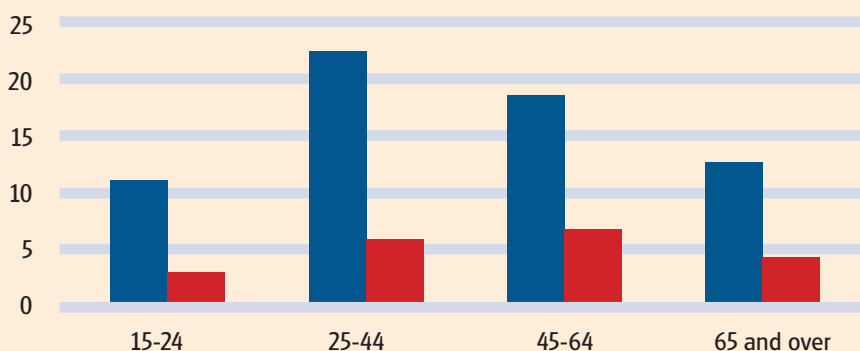

15%

New businesses make up a greater proportion of businesses in London than any other region of the UK at 15 per cent in 2008. In Northern Ireland, just 9.5 per cent of businesses were start-ups. Source: Office for National Statistics Inter-Departmental Business Register

Well-being

Suicide rates per 100,000 in the UK 2008

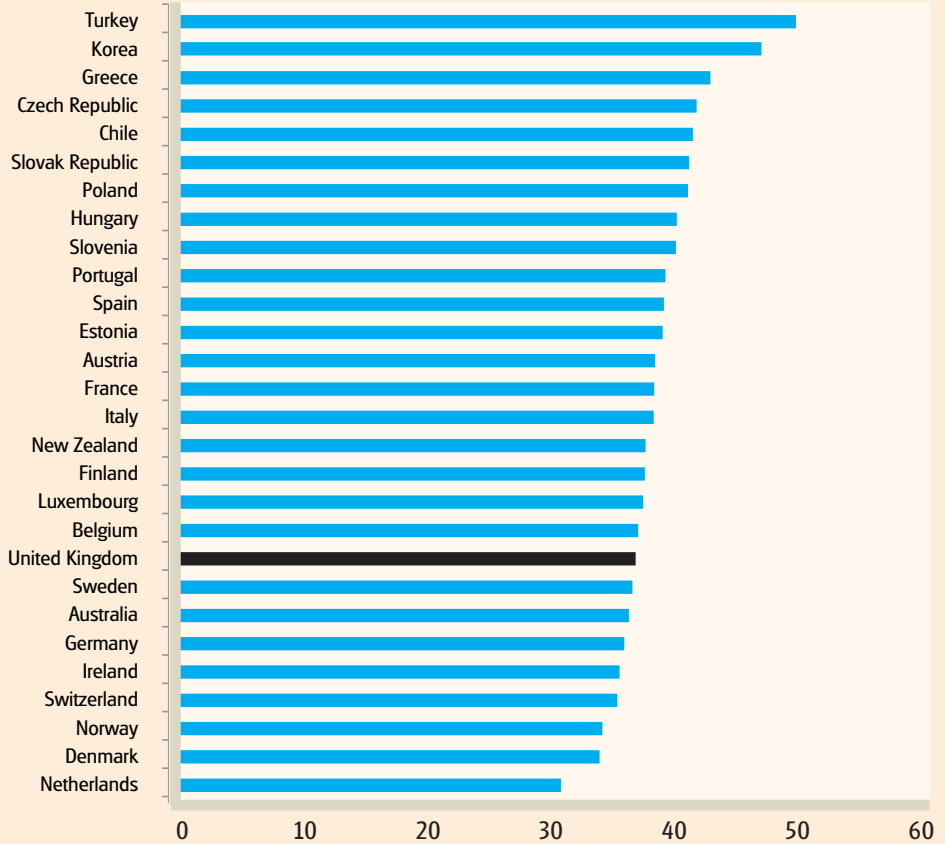

Men were over three times as likely as women to commit suicide in the UK in 2008. For men suicides were most common among 25-44 year olds. Among women 45-64 year olds were most at risk. Source: Office for National Statistics
